AI Phone Lip Sync Performance Guide

Create viral phone-filming content using AI — look like someone caught you performing

⚡ The Concept

Record a simple performance video of yourself at any location. AI generates a photorealistic image of you holding a phone showing yourself performing — placed naturally into the scene. Then animate it into a lip sync video. The result? It looks like someone is filming you on their phone at an incredible location.

💡 **The Secret:** The green screen phone trick is key — AI puts a green screen on the phone in the generated image, giving you a compositing target for CapCut. Whatever you're wearing in the source video is EXACTLY what appears in the AI output.

📦 What You Need

2 REFERENCE IMAGES → AI IMAGE → AI VIDEO

1. REFERENCE 1 — YOUR FACE

A screenshot of yourself from the performance video. This locks in your exact appearance, outfit, and features for the AI.

2. REFERENCE 2 — THE LOCATION

The environment/location you want to be placed in — gas station, rooftop, city street, concert venue, anywhere viral.

🎬 Step-by-Step Walkthrough

Phase 1: Record Your Source Video

- 1 **Film yourself performing/lip syncing** your song at any location. Phone camera works perfectly. Dress for the scene — your outfit carries over to the AI output.
- 2 **Take a screenshot** of yourself from the video — this becomes Reference 1 (the person)
- 3 **Get your location image** — the environment where you want the scene set. This becomes Reference 2.

Phase 2: Generate the AI Image (Nano Banana Pro)

- 4 Head to **sniply.studio** → Create Studio → **Image Generation**
- 5 Select **Nano Banana Pro** model
- 6 Set aspect ratio to **1:1**
- 7 **Upload 2 reference images:** Reference 1 (you) and Reference 2 (the location)
- 8 Write your prompt (see below) and hit **Generate** ~11 credits

Phase 3: Create the Lip Sync Video (Kling AI)

- 9 Go to the **Video** tab → Select **Kling 2.6** model
- 10 Set duration to **10s**, aspect ratio to **9:16** (vertical), Audio: **off**
- 11 **Upload the AI-generated image** as the Starting Frame
- 12 Write your video prompt (see below) and hit **Generate** ~70 credits

Phase 4: Motion Tracking in CapCut (Optional)

- 13 **Import the generated video** into CapCut
- 14 Use **motion tracking** on the phone screen to lock the lip sync to the phone

15

This makes it look like someone is **actually holding a phone** with you performing on screen 🔥

⚠️ **The Green Screen Phone is Key:** The AI generates a green screen on the phone — this gives you a compositing target in CapCut. Use motion tracking to replace it with your actual lip sync footage for the most realistic result.

The Prompts

PROMPT 1 — IMAGE GENERATION (NANO BANANA PRO)

NANO BANANA PRO PROMPT (EXACT)

Use the first image as the exact base frame. Do not change the environment, pose, lighting, camera angle, car, or the three women in the background. Keep the man's identity, expression, and ultra-realistic skin texture the same. Add a realistic modern smartphone held horizontally directly in front of his mouth with a bright green chroma screen. Include a woman's hand and partial forearm entering from the side holding the phone, wearing a metallic watch and visible arm tattoos. Match scale, perspective, reflections, and contact shadows so the phone and hand blend naturally with the gas station lighting.

PROMPT 2 — VIDEO GENERATION (KLING 2.6)

KLING VIDEO PROMPT (EXACT)

Start with the first frame as the exact base: man seated in chair at nighttime gas station, arms crossed, eyes closed, car and three women in background unchanged. Maintain identical lighting, camera angle, depth of field, and ultra-realistic skin texture. From the right side of frame, animate a woman's hand with visible tattoos and a metallic watch smoothly moving into the scene while holding a modern smartphone horizontally with a bright green screen. The hand should travel naturally toward his face and stop with the phone positioned directly in front of his mouth, matching perspective, scale, and lighting reflections. Ensure realistic motion easing, subtle wrist rotation, natural finger grip, and correct contact shadows on his beard and hoodie. No change to his body pose or expression; only the hand and phone animate into place.

PROMPT 3 — QUICK IMAGE PROMPT (SIMPLE VERSION)

📄 SIMPLE NANO BANANA PROMPT

put a girl holding a phone infront of his mouth

💡 **Two Prompt Approaches:** The detailed prompt gives you precise control over every element. The simple prompt lets AI interpret more freely. Try both — sometimes simple works just as well!

🎨 Make It Yourself — Your Version

Here's how to adapt everything above for YOUR song, YOUR look, and YOUR location. Just swap the details below into the prompts.

🔧 Step 1: Fill In Your Details

Element	Our Example	Replace With Yours
Person Description	man seated in chair, camo Supreme hoodie, arms crossed, eyes closed	Describe yourself — what you're wearing, your pose, your look
Location/Scene	nighttime gas station, classic car, three women in background	Your location — studio, rooftop, concert, street, beach, anywhere
Phone Holder	woman's hand with tattoos and metallic watch	Anyone's hand — friend, clean hand, gloved hand, etc.
Phone Position	horizontally in front of his mouth	In front of face, angled up, from the side — experiment!
Vibe/Lighting	gas station lighting, nighttime, cinematic	Golden hour, neon, studio lights, natural daylight, moody

🔧 Step 2: Build Your Image Prompt

📄 YOUR TEMPLATE — FILL IN THE BLANKS

Use the first image as the exact base frame. Do not change the environment, pose, lighting, or camera angle. Keep **[YOUR DESCRIPTION]**'s identity, expression, and ultra-realistic skin texture the same. Add a realistic modern smartphone held **[POSITION — horizontally/vertically]** directly in front of **[his/her]** mouth with a bright green chroma screen. Include **[HAND DESCRIPTION]** entering from the side holding the phone. Match scale, perspective, reflections, and contact shadows so the phone and hand blend naturally with the **[YOUR SCENE]** lighting.

🔧 Step 3: Build Your Video Prompt

📋 YOUR TEMPLATE — FILL IN THE BLANKS

Start with the first frame as the exact base: **[YOUR PERSON + POSE DESCRIPTION]** at **[YOUR LOCATION]**, background unchanged. Maintain identical lighting, camera angle, depth of field, and ultra-realistic skin texture. From the **[side]** of frame, animate **[HAND DESCRIPTION]** smoothly moving into the scene while holding a modern smartphone horizontally with a bright green screen. The hand should travel naturally toward **[his/her]** face and stop with the phone positioned directly in front of **[his/her]** mouth, matching perspective, scale, and lighting reflections. Ensure realistic motion easing, subtle wrist rotation, natural finger grip, and correct contact shadows. No change to body pose or expression; only the hand and phone animate into place.

⚠️ **Key Rule:** The more specific your description, the better the result. Describe your outfit, accessories, pose, and the scene's lighting in detail. AI works best when you tell it exactly what to keep and what to add.

✨ The Workflow

Source video → AI image with phone + green screen → AI lip sync video → CapCut motion tracking = viral phone-filming content

🔥 Pro Tips

💡 **Dress for the Scene:** Whatever you're wearing in the source video is what appears in the AI output. If you want a specific look, wear it when you record.

💡 **Film at Viral Locations:** The more interesting/unique your location reference image, the more viral the result. Gas stations, rooftops, concert backstages, exotic locations — think visually striking.

💡 **CapCut Motion Tracking:** This is the finishing touch that sells the illusion. Lock your lip sync content to the phone screen using CapCut's motion tracking feature. Without it, you still have

a great image — with it, you have a viral video.

💡 **Multiple Scenes:** Record ONE performance, then swap out different location images and generate multiple scenes. One take = unlimited viral content.
