

Complete AI Artist Creation Workflow

Create Your Own AI Artist in 4 Simple Steps

What You'll Need

- Midjourney account
- Flux Nano access (FreePik)
- Kling 2.6 or Veo 3.1 account
- Basic image editing knowledge (optional)

STEP 1: Create Your Base Character in Midjourney

What This Does

Generates your AI artist's foundational look and identity

How To Do It

1. **Open Midjourney** (Discord or web interface)
2. **Use This Exact Prompt:**

A photo realistic picture of a black male artist, professional photography, studio lighting, high quality, 8k resolution, detailed facial features, modern style

3. **Prompt Variations to Try:**

- For different looks: Add "wearing streetwear" or "in formal attire"
- For different vibes: Add "moody lighting" or "bright and energetic"
- For specific styles: Add "90s hip hop aesthetic" or "modern R&B style"

4. **Generate Multiple Options** Create at least 4-8 variations

- Try different expressions: neutral, smiling, confident
- Experiment with angles: front-facing, 3/4 profile, side profile

5. **Select Your Best Image**

- Look for: Clear facial features, good lighting, realistic skin tones
- Avoid: Distorted features, blurry details, unnatural proportions
- Save in highest resolution available

Pro Tips for Step 1

- Add `--style raw` for more photorealistic results
 - Use `--ar 9:16` for vertical social media content
 - Generate variations of your favorite with the V1, V2, V3, V4 buttons
 - Keep consistent features across generations by using image references
-

STEP 2: De-AI Processing in Flux Nano

What This Does

Removes the "AI look" by adding realistic skin texture, pores, and imperfections

How To Do It

1. **Go to FreePik** and access Flux Nano
2. **Upload Your Chosen Character Image**
 - Use the highest resolution version from Step 1
3. **Apply De-AI Processing**
 - Prompt: "Add realistic skin texture, visible pores, natural skin imperfections, photorealistic detail, 8k quality"
4. **Advanced De-AI Prompts:**

Enhance with: natural skin texture, visible pores, subtle blemishes, realistic lighting, film grain, professional photography quality, remove artificial smoothness, add human imperfections

5. **Compare Results**
 - Generate 2-3 versions
 - Look for natural skin that doesn't look overly smooth
 - Check that facial features remain consistent
6. **Fine-Tune If Needed**
 - If too processed: Reduce intensity in prompt
 - If not realistic enough: Add "macro photography skin detail"

Pro Tips for Step 2

- Save both the original and de-AI processed versions

- The goal is to make it look like a professional photoshoot, not a 3D render
 - Don't overdo it - subtle is better than extreme
-

STEP 3: Build Your Visual Concept & Shots

What This Does

Creates different scenes, locations, and visual worlds for your AI artist

How To Do It

1. Plan Your Visual Concept

- Define the vibe: Urban? Luxury? Underground? Futuristic?
- List locations: Studio, city street, mansion, concert venue, desert, etc.
- Decide on mood: Dark and moody, bright and vibrant, cinematic, etc.

2. Create Scene Variations in Flux Nano Example Prompts for Different Concepts: Urban Street Scene:

[Your AI artist] standing in urban city street at night, neon lights, cinematic photography, moody atmosphere, street style fashion, professional music video aesthetic

Luxury/High-End:

[Your AI artist] in luxury penthouse, floor to ceiling windows, city skyline background, golden hour lighting, high fashion, editorial photography style

Performance/Stage:

[Your AI artist] on concert stage, dramatic stage lighting, smoke effects, crowd in background, energetic performance, professional concert photography

Intimate/Studio:

[Your AI artist] in recording studio, dim warm lighting, sitting at mixing board, creative atmosphere, behind the scenes vibe

3. Generate Multiple Angles for Each Concept

- Wide shot (full body, establishes scene)
- Medium shot (waist up, shows emotion)
- Close-up (face/expression, creates intimacy)
- Over-the-shoulder shots
- Dynamic angles (low angle for power, high angle for vulnerability)

4. Create 10-15 Different Shots Total

- Mix of locations and angles
- Vary expressions and poses
- Think about storytelling sequence

5. Maintain Consistency

- Use image reference of your character in each prompt
- Keep similar lighting styles within each scene
- Match the overall aesthetic across all shots

Pro Tips for Step 3

- Storyboard your video/content before generating
 - Think about how shots will transition
 - Create variations of your best concepts
 - Consider your music genre's visual language
-

STEP 4: Animate Your Shots

What This Does

Brings your static images to life with realistic motion

How To Do It

Option A: Using Kling 2.6

1. **Go to Kling AI Platform**
2. **Upload Your Image**
 - Select your best shots from Step 3
3. **Choose Animation Type**
 - **Subtle motion:** For atmospheric shots (slight head movement, breathing)
 - **Dynamic motion:** For performance shots (walking, gesturing, performing)
 - **Camera motion:** For cinematic feel (slow zoom, pan, dolly)
4. **Prompt for Animation**

Subtle head movement, natural breathing, slight body sway,
maintain facial features, smooth realistic motion,
cinematic camera movement

5. Advanced Animation Prompts:

- Performance: "Artist performing energetically, natural gestures, confident movements"
- Walking: "Slow confident walk towards camera, smooth motion"
- Atmospheric: "Gentle camera push in, subject looking around, ambient movement"

Option B: Using Veo 3.1

1. Access Veo 3.1 (Google's video AI)
2. Upload Your Shot
3. Describe Motion:

Cinematic shot of artist with subtle natural movements,
professional music video quality, smooth camera work,
realistic motion, maintain identity

4. Select Duration

- Start with 3-5 second clips
- Longer for establishing shots
- Shorter for quick cuts

Combining Tools Strategy

- **Kling 2.6:** Best for character motion and facial animation
- **Veo 3.1:** Best for complex camera movements and scene dynamics
- Use both and compare results for each shot

Pro Tips for Step 4

- Generate 2-3 versions of important shots
- Start with subtle animations - they look more realistic
- Keep clips short (3-8 seconds) for social media
- Export in highest quality available

BONUS: Putting It All Together

Editing Your Final Content

1. **Organize Your Clips** Group by scene/location
 - Arrange in story order
2. **Use Video Editor** (CapCut, Premiere Pro, Final Cut, DaVinci)
 - Import all animated clips
 - Add your music/audio
 - Apply color grading for consistency
 - Add transitions between scenes
 - Include text/titles if needed
3. **Content Ideas You Can Create:**
 - Full music video
 - Visualizer for streaming platforms
 - Instagram/TikTok promotional clips
 - Album artwork (use static images)
 - Behind-the-scenes style content
 - Lyric videos
 - Tour announcement visuals
 - Single cover animations

Export Settings for Social Media

- **Instagram Reels/TikTok:** 1080x1920 (9:16), 30fps, H.264
 - **YouTube:** 1920x1080 (16:9), 30fps or 60fps, H.264
 - **Instagram Feed:** 1080x1080 (1:1), 30fps, H.264
-

Troubleshooting Common Issues

Character doesn't look consistent across images:

- Use image reference feature in Midjourney
- Keep same prompt structure
- Use --cref parameter with original image

Motion looks unnatural:

- Use more subtle motion prompts
- Reduce animation
- intensity Try shorter clip durations

"AI look" still visible:

- Do another pass of De-AI processing
- Add film grain in post-production
- Apply subtle color grading

Features change between shots:

- Always use your base character as reference
- Be specific about facial features in prompts
- Generate more options and cherry-pick best matches

Advanced Tips for Pro Results

1. Create a Style Guide

- Document your prompts that work
- Save your best character references
- Note lighting and color preferences

2. Build a Shot Library

- Generate 50+ shots in different scenarios
- Have content ready for multiple releases
- Mix and match for different projects

3. Develop Multiple Characters Create a whole roster of AI artists

- Different looks for different music styles
- Build a fictional label/collective

4. Stay Consistent

- Use same tools and settings
- Maintain visual brand across content
- Create recognizable aesthetic

Legal & Ethical Considerations

- Always disclose that your artist is AI-generated
- Check platform policies on AI content
- Don't claim AI artist is a real person
- Use for creative/artistic purposes transparently
- Respect the tools' terms of service

Next Steps

1. Start with Step 1 today - create your base character

2. Experiment with different prompts and styles
3. Generate your first 5 concept shots
4. Animate your favorite shot
5. Share your creation and gather feedback

Ready to create unlimited content for your music?

This workflow lets you produce professional-quality visuals at a fraction of traditional costs. The future of music marketing is here.
