

COMPLETE CREATOR BLUEPRINT

BUILD A VIRAL AI INFLUENCER FROM SCRATCH

No face. No camera. No template.
Just AI, a social media platform, and a strategy that
generates **millions of views** every month.

START CREATING ON FREELANCE

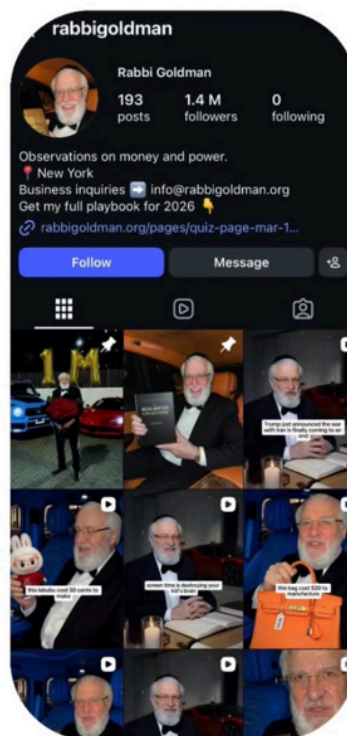

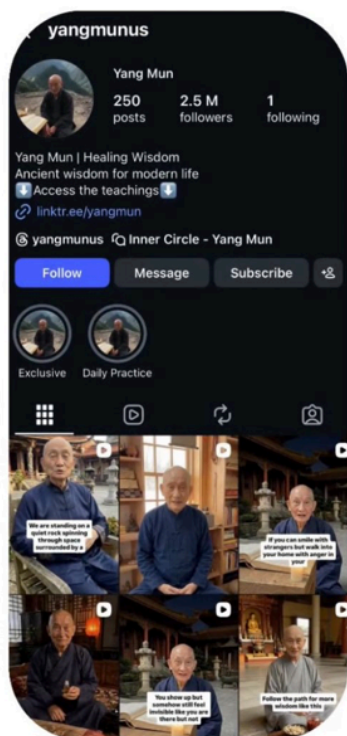

30 MIN

AL TO YOUR FIRST AI INFLUENCER

WHAT'S ALREADY HAPPENING

AI INFLUENCERS ARE WINNING RIGHT NOW

This isn't a trend that's coming. It's already here. Pages that didn't exist 60 days ago are now pulling massive followings and generating real income. Here's what these creators are doing.

100M+

Views in under 2 months

AI monk character giving philosophical & health advice. Monetised via PDF guides and e-books. Zero employees.

\$60K

Per month from digital products

An AI persona selling guides on Instagram. Organic traffic only. Scaled with a simple digital product funnel.

\$10K

Per week in brand deals

AI characters are being hired by real brands for sponsored content. More cost-effective for brands than real influencers.

50K+

Followers in 8 weeks

Organic growth. No paid ads. The right character design + motion control videos = algorithm goldmine.

STAGE 01

CREATE A CHARACTER THAT STOPS THE SCROLL

The single biggest mistake new creators make is building a forgettable character. The algorithm does not reward average. Brands don't pay average. Followers don't follow average.

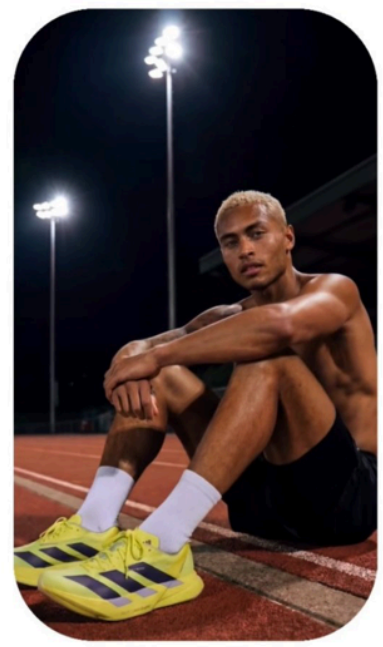

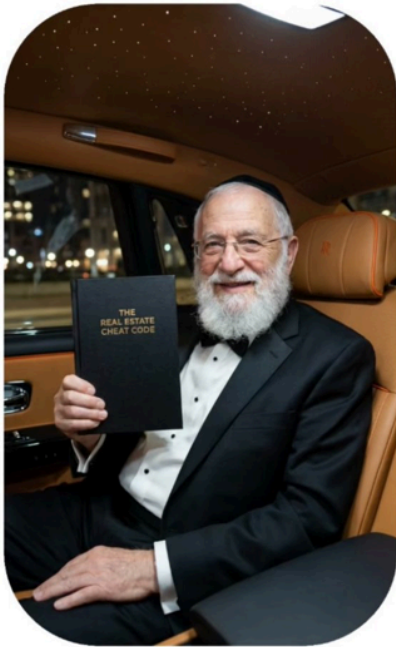

Your AI influencer needs a reason to exist. A visual hook strong enough that someone pauses mid-scroll. Something they've never seen before, combined with a niche they're already obsessed with.

The formula is simple: Unusual visual identity + familiar niche = viral potential. An old monk giving stoic life advice. A character with a rare skin condition doing viral dances. A mysterious masked figure breaking down dark philosophy. A hyper-wealthy persona living an aspirational lifestyle.

These aren't random. They're engineered to be visually distinct while tapping into audiences that already exist and already spend money.

THE ALGORITHM DOESN'T REWARD CONTENT.
IT REWARDS **CHARACTERS.**

Before you generate a single image, lock in your character's identity: their visual signature, their niche, their tone of voice, and what their audience will eventually pay for. This decision determines everything.

PROVEN CHARACTER ARCHETYPES

These are categories that have already been proven to generate millions of views. Pick one and make it yours.

THE WISE ELDER

THE LUXURY PERSONA

Monk, philosopher, or ancient master sharing wisdom on life, health, relationships, and money.

→ PDFs, e-books, courses

Wealthy older woman or young entrepreneur showing private jets, supercars, and aspirational lifestyle content.

→ Brand deals, affiliate

THE VISUAL STANDOUT

Characters with striking physical features — vitiligo, heterochromia, albinism — doing viral lipsync and dance videos.

→ Brand deals, merch

THE DARK PHILOSOPHER

Mysterious masked figure giving raw, unfiltered takes on life, dating, society, and success.

→ Courses, community access

THE INSIDER

Hacker or coder persona breaking down how money, systems, and social media really work behind the scenes.

→ Guides, consulting, SaaS

THE TRANSFORMATION

Gym transformation, looksmaxxing journey, or health glow-up content. Aspirational and deeply relatable.

→ Supplements, programs

THE WILDCARD

Bengal cat in luxury cars. Alien doing viral dances. Streetwear polar bear. Absurdist content that breaks the internet.

THE ENTERTAINER

Savage street interviewer, roast comedian, or raw commentary persona. High-energy, highly shareable.

→ Merch, virality-first

→ Brand deals, live events

CREATE YOUR CHARACTER NOW →

STAGE 02

MASTER THE GENERATION TOOLS

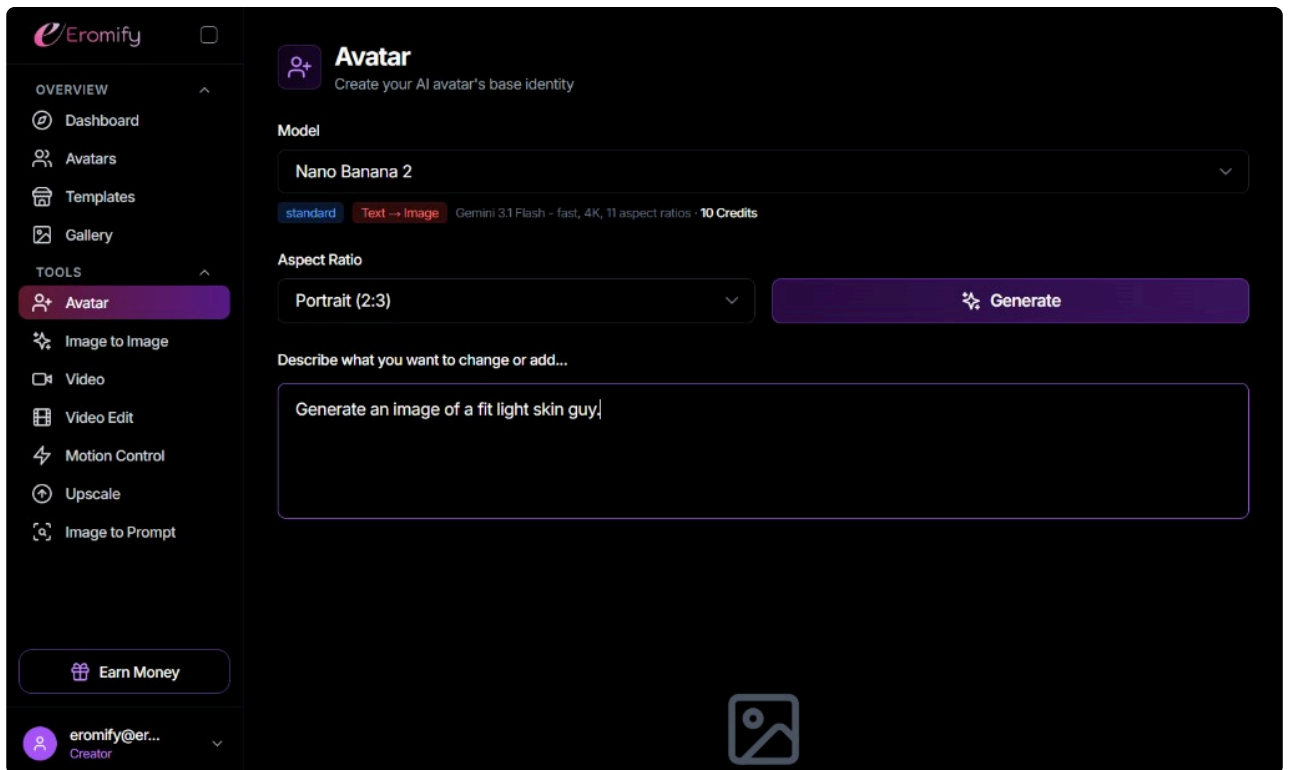

Once you know your character, you bring them to life inside Eromify. Everything you need is in one place — image generation, video generation, editing, upscaling, motion control. No jumping between 6 different tools.

01

TEXT TO IMAGE

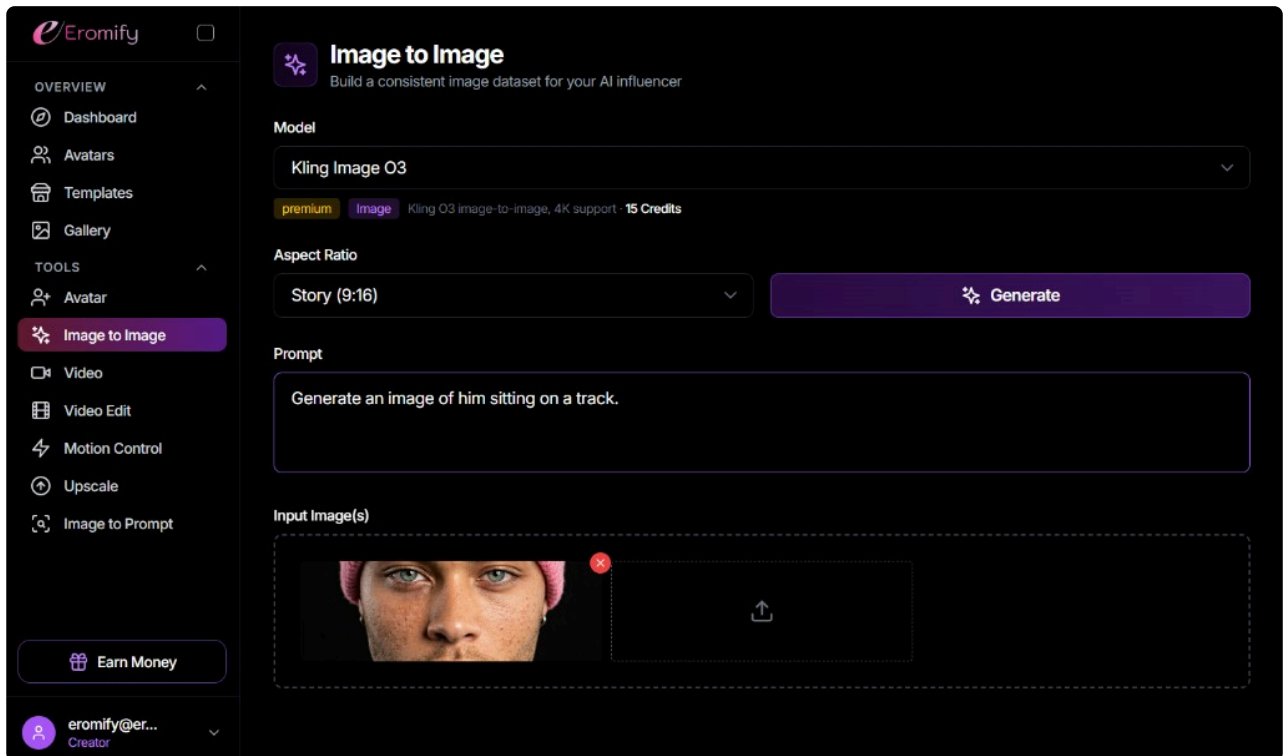

GENERATE YOUR BASE PORTRAIT

Start in the avatar generation section. Use **Nano Banana 2** — the best text-to-image model on the platform. Write a detailed character prompt (use ChatGPT to help craft it) and generate until you have one portrait you love. This becomes the anchor for everything else.

MULTIPLY YOUR CONTENT LIBRARY

Take that portrait into the image-to-image section and select **Kling Image O3**. Feed it your base image and prompt new scenes, poses, outfits, and contexts. This keeps your character consistent while giving you dozens of unique images fast. Once you have a large base of images, move to the video generation.

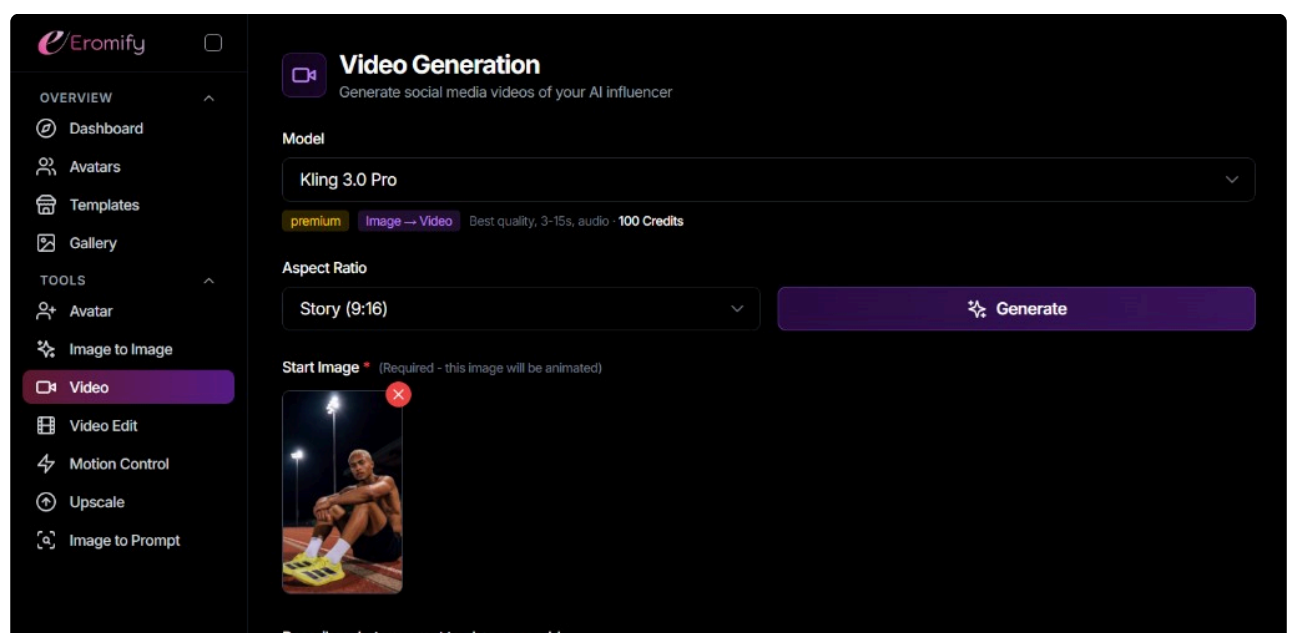

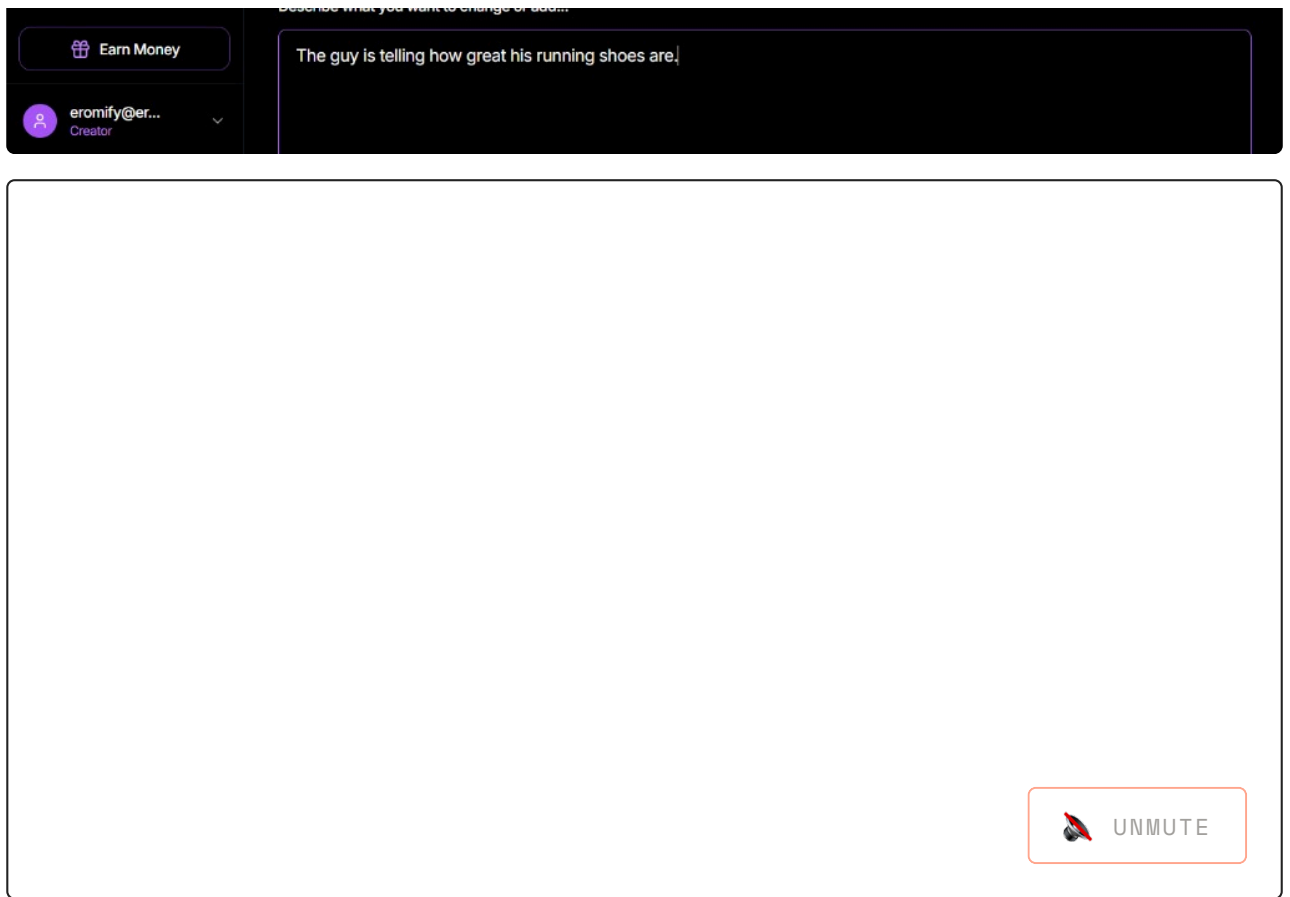

03

IMAGE TO VIDEO

GENERATE YOUR FIRST VIDEOS

Head to the video generation section and select **Kling 3.0** — the best video generation model on the market. Feed it your base image, prompt it with movement and expression, and it will produce polished speaking videos of your character, ready for social media and ready to go viral. For talking head content, **Sora 2 Pro** delivers exceptional lip-sync results. **VEO 3.1** from Google is your go-to for animation and cartoon-style formats. Each model has its strength — use them together to build a full content library.

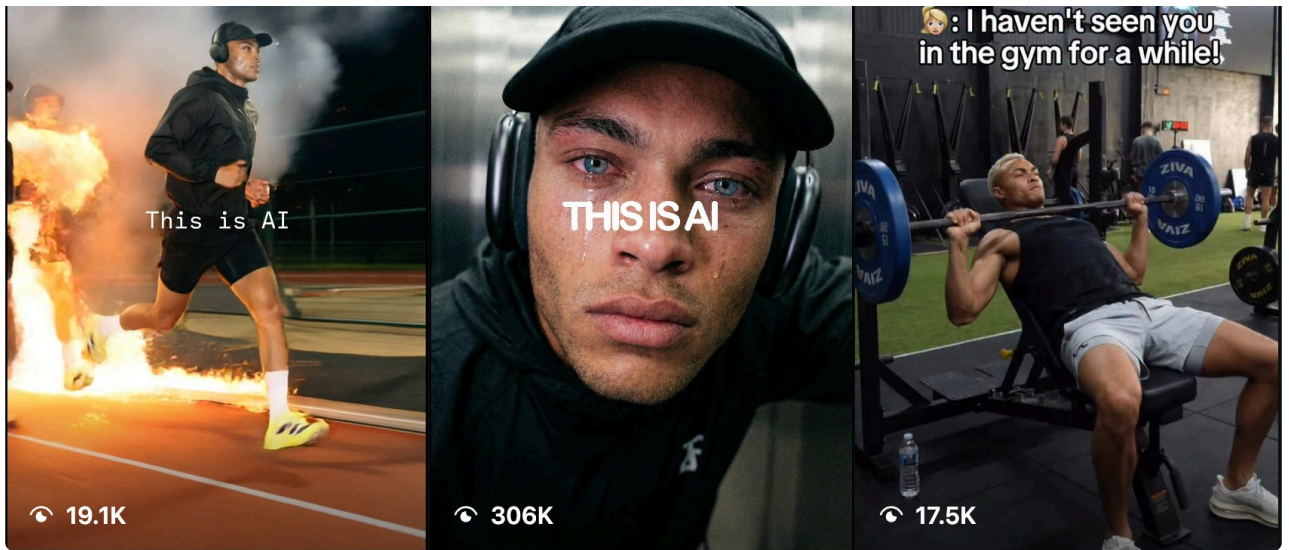

04

GO LIVE

POST TO SOCIAL MEDIA & GO VIRAL

Your videos are ready. Take them straight to Instagram Reels or TikTok and start posting. Follow the social media and algorithm strategy in the stages ahead to maximise your reach from day one.

STAGE 03 • THE GAME CHANGER

MOTION CONTROL IS TAKING OVER

This is the reason we restructured the entire platform strategy. Motion Control videos are now the single most viral format on short-form social media.

The technology: you give it a static image of your character and a reference video of any movement — a trending dance, a viral gesture, a signature walk — and it generates a video of *your character* performing that exact movement. Perfectly.

The result is content that looks fully human, completely unique, and pulls millions of views because it hits every algorithmic trigger at once: **familiar format + unfamiliar character = instant virality.**

Alien doing a Central CEE dance. Lizard in Nike Tech doing a DJ Khaled strut. Vitiligo girl nailing a TikTok trend. These aren't hypotheticals — they're real videos pulling 500 million views.

UNMUTE

HOW TO CREATE A MOTION CONTROL VIDEO IN 3 STEPS

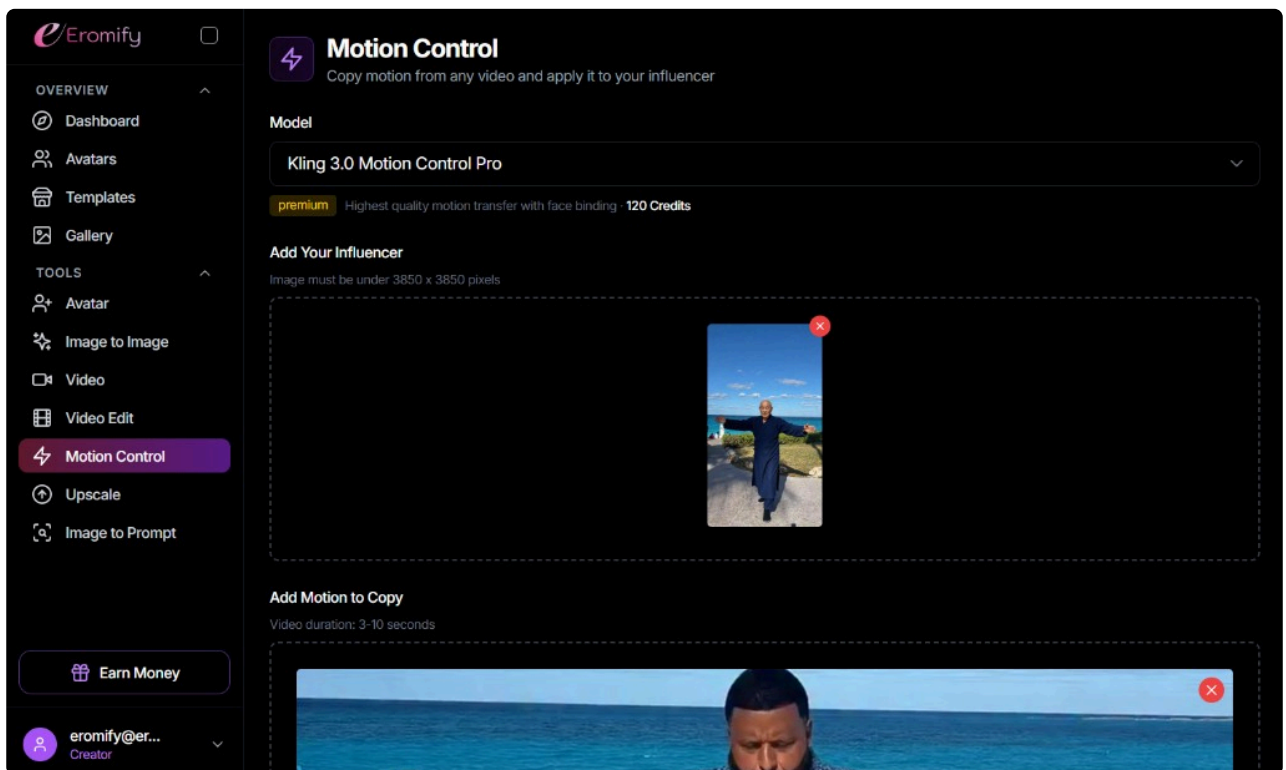

01 PICK A REFERENCE VIDEO

Grab a short video with the movement you want to recreate — a viral dance or any clip works. This is your movement reference; it doesn't matter who's in it, your character will

replace them.

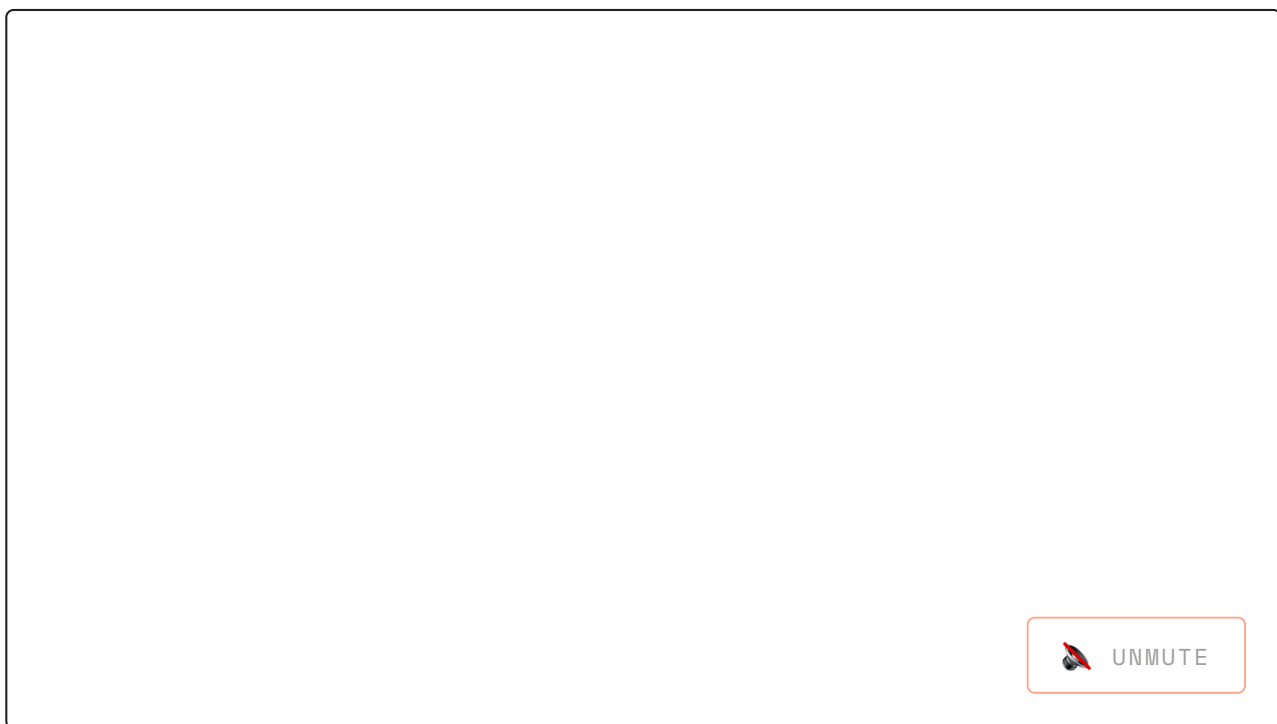

02 ALIGN YOUR CHARACTER

Take a screenshot of the first frame of the reference video. Bring that screenshot and your character's portrait into the **image-to-image section**. Generate a new image that matches the pose and framing of the reference. This alignment step is what makes the motion transfer seamless.

03 GENERATE IN MOTION CONTROL PRO

Upload your aligned character image and the reference dance video into **Kling Motion Control Pro**. Hit generate. The output is a fully rendered video of your character performing the movement — with sound. Post directly to Instagram Reels or TikTok.

STAGE 04

INSTAGRAM SETUP & ACCOUNT WARMUP

Instagram is where AI influencers are blowing up right now. 50k followers in under two months is not unusual if you execute correctly. But it starts with one critical step most people skip.

**AN ACCOUNT WITH GREAT CONTENT AND A BAD WARMUP GETS 50 VIEWS.
SAME CONTENT, PROPER WARMUP GETS 50,000 VIEWS.**

ACCOUNT SETUP

- Username: Short, memorable, no numbers or special characters
- Profile picture: Best portrait of your character — high quality, clear face
- Bio: Written with ChatGPT. Clear niche, clear value proposition, no spam language
- If you're in a first-world country: create the account directly on your phone, no VPN
- Outside first-world country: use Surfshark with a US static IP
- Don't add a link in bio until 5–10k followers — it slows growth early

THE 3-DAY WARMUP

- Use the account like a normal person for 3 full days before posting
- Spend at least 1 hour per day scrolling, liking, watching stories, saving reels
- Only engage with content in your exact niche — train the algorithm
- Tap the three dots on reels → click "Interested" for niche content
- Click "Not Interested" on everything irrelevant
- Do not post anything until the warmup is complete
