FLOATING MUSIC

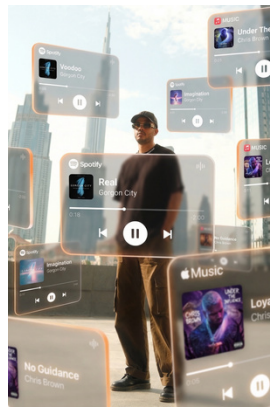

~ Higgsfield

STEP 1: TAKE YOUR PHOTO

STEP 2: CREATE THE IMAGE

Use the Seedream 4.5 Model via Higgsfield.ai

PROMPT USED

Floating around the person are multiple semi-transparent music player UI cards — a mix of Spotify and Apple Music interfaces — hovering at different depths in 3D space. Some cards overlap in the foreground, others fade softly into the background, creating a layered parallax feel. The cards feature artists like

[ARTIST 1], [ARTIST 2], and [ARTIST 3] with songs like [SONG 1], [SONG 2], and [SONG 3].

UI style: frosted glass panels with warm amber glowing outlines, pill-shaped progress bars, album art thumbnails, and playback controls. Cinematic depth of field keeps the subject sharp while the cards drift at varying distances. The overall mood feels like the person's entire music world has materialized around them in augmented reality.

STEP 3: ANIMATE

Use kling 3.0

Use your photo as reference and describe the camera movement.

for example:
slow camera orbit. person stays static
frozen in time only camera orbits very slowly

STEP 4: Get creative

Make sure to tag me when you recreate this so I can see your version
