Creating a 15-Second Fashion Film with the Storyboard Tool

Introduction

You can't create consistent stories with AI. Well, that's a lie.

This workflow shows you how to go from a single image to a complete 15-second cinematic video using the storyboard tool inside Freepik Spaces. One visual. Four steps. Everything connected, everything consistent.

FREEP!K

How It Works

The workflow follows a simple four-step flow: image → storyboard → prompt → video. Each node feeds the next. Once it's built, you can save it and reuse it for any project.

Step 1 | Start with your key visual

Everything begins with one image. Create or select the key visual you'll work with.

Generate a few variations before moving forward. The one you choose will define the visual tone of the whole film.

In this case, this is our prompt:

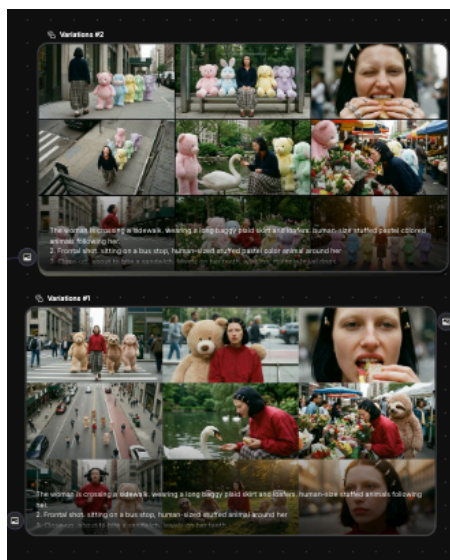

analog photography. no framings or text. close-up to the subject's face. subject is a young caucasian woman. black perfect hair with golden hairclips with jewels. bleached brows, clear brows, prominent cheek bones, subtle freckles, natural full lips. greek style nose. slanted eyes. subject in the middle of the composition. wearing a red tracksuit jacket. setting is a city. background out of focus. diffused lighting. subject gazing off camera.

Step 2 | Generate your storyboard

Connect your image to a storyboard node and select the number of scenes you want in your video.

The storyboard breaks your visual into a sequence of scenes, each one a different moment, setting, or framing that builds the narrative. Generate a few variations and pick the one that best tells the story you have in mind. This becomes your shot list.

Variations #1 and #2 prompt:

The woman is crossing a sidewalk. wearing a long baggy plaid skirt and loafers. human-size stuffed animals following her.

2. Frontal shot. sitting on a bus stop, human-sized stuffed animal around her

3. Close-up. about to bite a sandwich. jewels on her teeth.

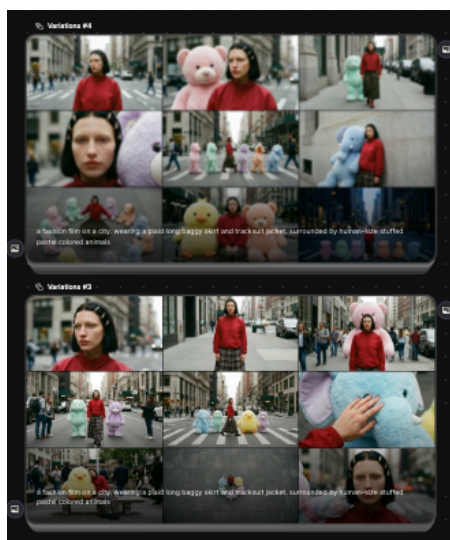

4. Aerial shot. walking down the street. human sized stuffed animal around her

5. Frontal shot, interacting with a swan in the park.

6. At a street market, smelling flowers. human size stuffed animal around her.

7. Frontal tracking shot. running through the city. human size stuffed animal running next to her

8. Sitting in the park. human sized stuffed animals next to her

Variations #3 and #4 prompt:

a fashion film on a city. wearing a plaid long baggy skirt and tracksuit jacket. surrounded by human-size stuffed pastel colored animals

Step 3 | Build your video prompt with the assistant

Connect the storyboard to an assistant node. Use this prompt to generate a structured Seedance 2.0 video prompt:

Based on this fashion film storyboard, create a video prompt for Seedance 2. 15 seconds long. Dynamic cuts, smooth transitions, cinematic camera movements. The vibe is playful. No background music, coherent SFX. High quality. Use timestamps. Be sure to include every scene in the storyboard in order. Use this prompt structure:

[Scene Setting]

[Visual Style]

[Lighting]

[Key Textures]

[Type of Video]

[Sound Design]

0-Xs —

X-Xs —

X-Xs —

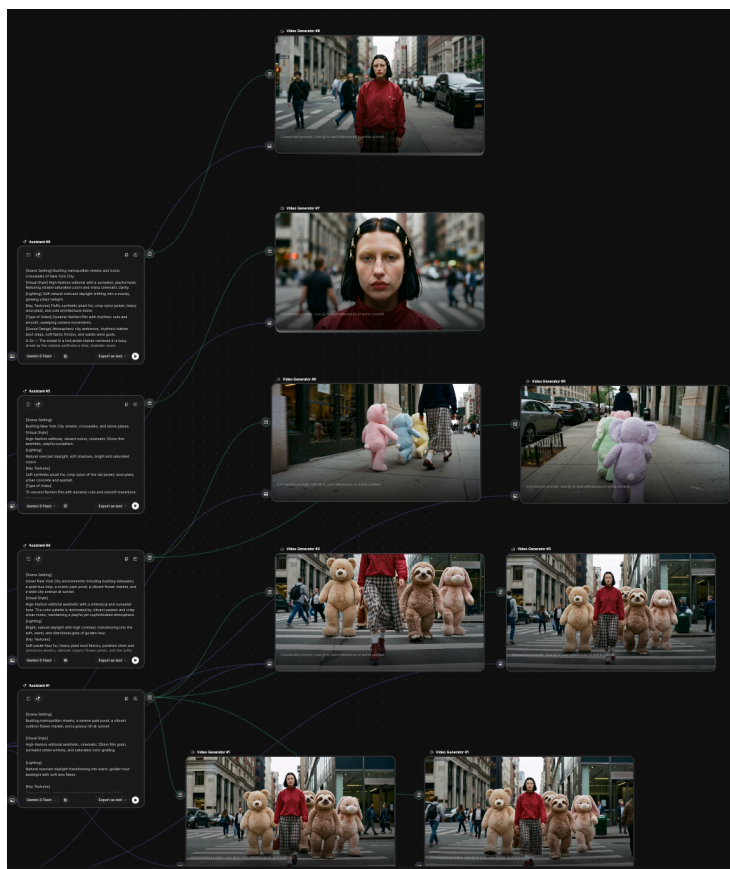

X-Xs —

The assistant generates a fully structured, timestamped video prompt, ready to plug directly into Seedance 2.0

FREEP!K

Step 4 | Generate your video

Connect both the storyboard and the assistant nodes to Seedance 2.0. Set it to 15 seconds, audio on, and generate.

Each prompt produces a complete scene sequence that follows the storyboard order: consistent character, setting, and visual tone across every cut.

Final Thoughts

Save the workflow and reuse it as many times as needed. Swap the key visual, adjust the storyboard, update the vibe in the assistant prompt, and you have a completely new film in minutes.

One idea. One image. A complete 15-second story.
