

AI Collage Music Video Guide

Turn AI-generated images into cinematic collage-style music videos -- no camera, no crew, no studio

The Concept

Create a vertical video with multiple rounded-corner panels playing simultaneously -- close-up eyes, lip syncs, full-body shots, a featured model, all moving at once. Think high-fashion music video meets animated mood board. The kind of content blowing up on Instagram Reels and TikTok right now.

The Secret: Everything starts from just a headshot and outfit reference. One face photo = unlimited scenes, angles, and looks.

PHASE 1 -- Generate Your Image Library

Go to Create Studio -> Images. Generate 5-8 images with consistent face and outfit across different scenes and angles.

Step 1: Base Full-Body Studio Shot

Upload: Image 1 = clear headshot/face photo | Image 2 = outfit reference photo

PROMPT -- COPY & PASTE

FULL BODY BASE:

Place the subject from image 1 standing fully upright in a professional studio with a seamless infinite white background. Preserve his exact facial features, skin tone, hairstyle, beard shape, and body proportions with high skin realism and natural texture. Dress him in the exact outfit from image 2: [DESCRIBE THE OUTFIT IN DETAIL]. Ensure the clothing fits naturally with realistic fabric folds and weight. Use soft studio lighting, subtle ground shadow under the feet, centered full-body composition, ultra-realistic editorial fashion photography style, 85mm lens, sharp focus, high detail.

Pro Tip: Be extremely specific about the outfit. Mention patterns, colors, fit (oversized, slim, cropped), accessories (chains, watches, belts), and shoes. The more detail, the better the match.

Step 2: Scene Variations (Props, Vehicles, Environments)

Use your base studio shot as Image 1, then add a prop/vehicle/environment photo as Image 2.

PROMPT -- COPY & PASTE

SUBJECT WITH VEHICLE/PROP:

Use image 1 as the identity and outfit reference, and image 2 as the vehicle reference. Take the subject from image 1 and place them leaning in a relaxed way on the front-left side of the exact same [VEHICLE DESCRIPTION] from image 2. Match the vehicle one-to-one. Preserve the subject's exact facial features, skin tone, hairstyle, beard shape, and body proportions,

Step 3: Close-Up Detail Shot

This gives you the cinematic eye and mouth panels for the collage.

PROMPT -- COPY & PASTE

CLOSE-UP FASHION PORTRAIT:

Tight close-up portrait from chest up, man in [OUTFIT DESCRIPTION], gold chain and accessories visible, [PROP/VEHICLE] blurred in background, soft studio rim lighting, editorial fashion photography, bokeh, 85mm lens, cinematic color grading with warm tones

Step 4: Generate Multiple Angles

PROMPT -- COPY & PASTE

LOW-ANGLE HERO: Cinematic low-angle shot, camera tilted upward from ground level, dramatic lighting from the left, shallow DOF, 35mm anamorphic lens flare, moody contrast

WIDE THREE-QUARTER REAR: Wide cinematic shot from rear three-quarter angle, man at front corner, white seamless backdrop, symmetrical composition, high-end automotive ad style

SIDE PROFILE SILHOUETTE: Man silhouetted against bright white background, strong backlight creating rim light on both person and vehicle, stark contrast, monochromatic mood

OVERHEAD BIRD'S-EYE: Top-down view, man standing beside driver-side door looking up at camera, graphic composition, clean geometric lines, luxury automotive campaign

DUTCH ANGLE DETAIL: Dutch angle low shot focused on [wheels/shoes/accessories], shallow DOF, tungsten warm highlights on chrome trim, street-luxury aesthetic

PHASE 2 -- Animate Your Images

Lip Sync (Create Studio -> Lip Sync)

1. Upload your close-up image (chest-up works best)
2. Upload your song audio
3. AI animates the face to match the vocals

Key Trick: One lip sync gives you TWO collage panels -- crop to the mouth area for a letterbox lip sync panel, and crop to the eye area for a letterbox eyes panel. One generation, two clips!

Dolly Zoom Animation (Create Studio -> Video)

PROMPT -- COPY & PASTE

DOLLY ZOOM:

Tight chest-up framing of man in [OUTFIT DESCRIPTION], standing in front of [BACKGROUND] in white studio. Very slow dolly-in, fabric texture catches light, gold chain sways imperceptibly with a breath, [BACKGROUND] soft in background bokeh, intimate fashion editorial film, almost still, warm tones

Motion Control Dance (Create Studio -> Motion Control)

1. Upload your generated full-body image as the reference image

PHASE 3 -- Assemble in CapCut

Open CapCut desktop. New project: 9:16 vertical (1080x1920). Background: light gray/off-white for clean editorial, or black for moody. Import all generated clips.

The Rectangle Mask Technique (repeat for each clip)

1. Drag a clip onto a new track on the timeline
2. Select the clip -> Video tab (right panel) -> Mask -> Rectangle
3. Scroll down to Round corners -> set to 50%
4. Resize the mask to fit the panel shape (wide letterbox for eyes, square for full-body)
5. Position the clip on the canvas where it belongs

[!] Each clip goes on its own separate track. Stack them so all panels play simultaneously. Leave small gaps between panels for the background to show through.

Collage Layout

- TOP: EYES -- Letterbox (dolly zoom or lip sync, cropped to eyes)
- MIDDLE LEFT: FULL BODY -- Standing shot with vehicle
- MIDDLE RIGHT: FEATURED MODEL -- Dance clip or posed shot
- BOTTOM LEFT: EYES -- Letterbox (second subject or different angle)
- BOTTOM: LIP SYNC -- Letterbox (mouth close-up, singing along)

Final Touches & Export

1. Add your song audio to the timeline
2. Sync clip cuts to the beat
3. Adjust timing so all panels play simultaneously
4. Export at 1080x1920, 30fps for Reels/TikTok

The Complete Formula

Headshot + Outfit Ref -> Generate image library -> Animate (lip sync + dolly + dance) -> Collage in CapCut with rounded rectangle masks -> Add song -> Export. That's it.
