

Colors-Style Performance Video Guide

Create a professional Colors-inspired performance video using just your phone, an idea, and AI

The Concept

A multi-angle performance video inspired by the iconic Colors Show format -- bold single-color background, hanging vintage microphone, cinematic lighting -- all generated with AI and brought to life with your own cell phone performance footage.

What You Need

- An Aurora Studio account (auroraperformancestudio.com)
- A cell phone to record your performance
- Reference images from a Colors performance (2 angles: wide + close-up)
- A photo of yourself to use as the subject reference
- Your song/audio ready to perform to

Step-by-Step Process

Step 1: Find Your Reference Images

Screenshot or save two angles from any Colors Show performance -- one wide/full-body shot and one medium close-up. These will be the composition reference for your AI-generated images.

Step 2: Open Aurora Studio -> Create Studio -> Image

Go to auroraperformancestudio.com -> Create Studio. Select the Image tab. Set aspect ratio to 9:16.

Step 3: Upload Reference Images

Upload two reference images: your Colors reference screenshot + a photo of yourself. The AI will use both to place you into the scene.

Step 4: Generate -- Wide Angle (Full Body)

PROMPT -- COPY & PASTE

Place the subject (man in yellow jacket) into a minimalist studio performance scene. Full-body side profile pose, arms slightly extended forward as if performing. Use the exact suspended vintage studio microphone from the reference -- identical shape, size, material, cable -- hanging from ceiling at chest level. Keep microphone photorealistic to reference. Environment is a seamless hot pink cyclorama studio -- background and floor are one continuous hot pink color, no visible edges or corners. Soft even glossy lighting with smooth gradient. Subject stands on a circular performance platform matching the hot pink tone, slightly elevated with subtle shadow and faint reflective sheen. Preserve exact facial likeness, beard, skin tone,

Step 5: Generate -- Close-Up (Medium Shot)

Upload your wide angle result as Image 1, keep your selfie as Image 2. Use this prompt:

PROMPT -- COPY & PASTE

Medium close-up of the subject from the waist up, centered in frame, facing slightly left, same suspended vintage microphone visible at chest/face level from the reference -- keep identical microphone design. Hot pink seamless cyclorama studio -- floor and walls same continuous pink. Soft studio lighting, rim light, slight reflective floor shine. Preserve exact facial likeness, beard, hairstyle, skin tone. Same outfit as wide shot. Ultra-realistic 4K photoreal quality.

Step 6: Record Your Performance Video

Record yourself performing to your track. Stand in the same pose and angle as your wide shot. Background doesn't matter -- the AI will replace it. Keep your movements natural.

Step 7: Animate with Motion Control

1. Go to auroraperformancestudio.com -> Motion Control
2. Upload each AI-generated image as the source image
3. Upload your performance recording as the motion source
4. Hit Generate -- the AI animates your scene with your real movements

Generate 2 angles (wide + close-up), animate both, then edit them together for a full Colors-style performance video. Cut between angles on the beat for maximum impact.

Customization -- Make It Your Own

Swap these elements in the prompt for your look:

- Background color: Replace 'hot pink' with any color -- deep blue, forest green, blood red, all white, etc.
- Outfit: Replace 'yellow jacket, black shorts, white socks' with your exact outfit
- Microphone: Keep the vintage mic description -- it's what makes it look like a real Colors shoot
- Pose: Change 'side profile' to 'facing camera', 'three-quarter angle', etc.
- Mood: Add 'golden hour warm tones' or 'cool blue cinematic' to shift the lighting vibe
