Colors-Style Performance Video — Prompt Guide

Create a professional Colors-inspired performance video using just your phone, an idea, and AI

⚡ The Concept

A multi-angle performance video inspired by the iconic **Colors Show** format — bold single-color background, hanging vintage microphone, cinematic lighting — all generated with AI and brought to life with your own cell phone performance footage.

⚡ What You Need

- A **Sniply Studio** account (sniply.studio)
- A cell phone to record your performance
- Reference images from a Colors performance (2 angles: wide + close-up)
- A photo of yourself to use as the subject reference
- Your song/audio ready to perform to

⚡ Step-by-Step Process

1

Find Your Reference Images

Screenshot or save two angles from any Colors Show performance — one **wide/full-body shot** and one **medium close-up**. These will be the composition reference for your AI-generated images.

Reference: Wide Angle

Reference: Close-Up

2

Open Sniply Studio → Create Studio → Image

Go to sniply.studio and navigate to the **Create Studio**. Select the **Image** tab. Choose the **Nano Banana Pro** model. Set aspect ratio to **9:16**.

3

Upload Reference Images

Upload **two reference images**: your Colors reference screenshot + a photo of yourself. The AI will use both to place you into the scene.

4

Generate — Wide Angle (Full Body)

Paste this prompt and hit Generate:

Place the subject (man in yellow jacket) into a minimalist studio performance scene. Full-body side profile pose, arms slightly extended forward as if performing. Use the exact suspended vintage studio microphone from the reference – identical shape, size, material, cable – hanging from ceiling at chest level. Keep microphone photorealistic to reference. Environment is a seamless hot pink cyclorama studio – background and floor are one continuous hot pink color, no visible edges or corners. Soft even glossy lighting with smooth gradient. Subject stands on a circular performance platform matching the hot pink tone, slightly elevated with subtle shadow and faint reflective sheen. Preserve exact facial likeness, beard, skin tone, hairstyle, body proportions. Outfit identical: yellow jacket, black shorts, white socks, black shoes, all accessories. Cinematic studio lighting, gentle floor shadow, rim light separation, ultra-realistic skin texture, natural pores, sharp clothing detail, high-end music video aesthetic, 4K photoreal quality.

Generated: Wide

Generated: Close-Up

💡 **Pro Tip:** Customize the prompt by changing "hot pink" to any color you want — red, blue, green, orange. Change the outfit description to match what you're actually wearing. Make it yours!

5

Generate — Close-Up Angle

Same process, new prompt. Upload the close-up reference + your photo:

Place the subject (man in yellow jacket) into a studio performance scene. Medium close-up from chest up. Subject turned slightly to side but mostly facing camera — approximately 30-45° angled pose, majority of face visible (both eyes, nose bridge mostly facing camera, slight cheek contour). Use the exact suspended vintage studio microphone from reference — identical design, metallic finish, hanging cable — positioned in front at mouth level with same spacing as reference. Environment is a seamless continuous super hot pink cyclorama background filling entire frame top to bottom, no visible floor line, corners, or edges. Preserve exact facial likeness, beard, hairstyle, skin tone, proportions from yellow jacket reference. Outfit identical: yellow jacket, black shorts, accessories unchanged. Pose natural and expressive as if mid-performance, hands slightly raised or gesturing. Soft even studio lighting, gentle shadows, subtle rim light separation, ultra-realistic skin texture with natural pores, sharp clothing detail, shallow depth of field but subject fully crisp, high-end music video aesthetic, 4K photoreal quality.

6

Record Your Performance

Using your cell phone, record yourself performing your song from the **exact same two angles** as the images you generated. Match the pose and framing as closely as possible.

Performance: Wide Angle

Performance: Close-Up

💡 **Pro Tip:** You don't need a studio or fancy setup. Just make sure your body angle and framing match the generated images. The AI handles the rest. Perform with energy — the motion transfer picks up on your movement.

7

Animate with Motion Control

Go back to Sniply Studio and click on **Motion Control**. For each angle:

- Upload the **AI-generated image** as the source
- Upload your **cell phone performance video** as the motion reference
- Add a short prompt to guide the motion (e.g., "man performing and singing expressively")
- Generate and let the AI bring your image to life

8

Edit & Export

Once both angles are generated, combine them in any video editor (CapCut, Premiere, or even the Sniply editor). Cut between the wide and close-up angles to match the energy of your performance. Add your song audio, and you're done.

💡 **The Secret:** The magic is in matching your cell phone performance angles to the AI-generated images. The closer the match, the better the motion transfer. Take a few attempts if needed — it's worth it.

⚡ The Final Result

This is what your finished video looks like — AI-generated scene + your real cell phone performance combined through Motion Control:

Final Video — AI Scene + Your Performance 🔥

🎬 **This is what your audience sees.** A full Colors-style performance video — and all you needed was your cell phone, Sniply Studio, and this guide.

⚡ Customize It

This guide uses a **hot pink** Colors theme, but you can make it any vibe:

- **Change the color:** Replace "hot pink" with any color in the prompts
- **Change the outfit:** Update the outfit description to match what you're wearing
- **Change the set:** Swap "cyclorama studio" for outdoor scenes, concert stages, etc.
- **Add props:** Add guitar, piano, DJ setup — describe them in the prompt
