

SNIPLY STUDIO

AI Collage Music Video Guide

Turn AI-generated images into cinematic collage-style music videos — no camera, no crew, no studio

✨ THE FINAL RESULT

A cinematic collage music video — built entirely from AI-generated images

⚡ The Concept

Create a vertical video with multiple rounded-corner panels playing simultaneously — close-up eyes, lip syncs, full-body shots, a featured model, all moving at once. Think high-fashion music video meets animated mood board. The kind of content blowing up on Instagram Reels and TikTok right now.

💡 **The Secret:** Everything starts with generating a library of consistent AI images from just a headshot and outfit reference. One face photo = unlimited scenes, angles, and looks.

PHASE 1

🖼️ Generate Your Image Library

Go to **Create Studio** → **Images** → **Nano Banana**. You'll generate 5-8 images with consistent face and outfit across different scenes and angles.

Step 1: Base Full-Body Studio Shot

Upload two reference images: **Image 1** = clear headshot/face photo | **Image 2** = outfit reference photo

REFERENCE: Face

Image 1 — Clear headshot for identity

REFERENCE: Outfit

Image 2 — Outfit inspiration photo

📄 PROMPT — FULL BODY BASE

Place the subject from image 1 standing fully upright in a professional studio with a seamless infinite white background. Preserve his exact facial features, skin tone, hairstyle, beard shape, and body proportions with high skin realism and natural texture. Dress him in the exact outfit from image 2: **[DESCRIBE THE OUTFIT IN DETAIL]**.

Ensure the clothing fits naturally on his body with realistic fabric folds and weight. Use soft studio lighting, subtle ground shadow under the feet, centered full-body composition, ultra-realistic editorial fashion photography style, 85mm lens, sharp focus, high detail.

↓ RESULT: Full-Body Studio Shot

AI-generated base image combining face + outfit references

💡 **Pro Tip:** Be extremely specific about the outfit. Mention patterns, colors, fit (oversized, slim, cropped), accessories (chains, watches, belts), and shoes. The more detail, the better the match.

Step 2: Scene Variations (Props, Vehicles, Environments)

Use your base studio shot as **Image 1**, then add a prop/vehicle/environment photo as **Image 2**.

REFERENCE: Subject

Image 1 — Your Step 1 result

REFERENCE: Vehicle

Image 2 — Maybach prop reference

📋 **PROMPT — SUBJECT WITH VEHICLE/PROP**

Use image 1 as the identity and outfit reference, and image 2 as the vehicle reference. Take the subject from image 1 and place them leaning in a relaxed way on the front-left side of the exact same **[VEHICLE DESCRIPTION]** from image 2. Match the vehicle one-to-one. Preserve the subject's exact facial features, skin tone, hairstyle, beard shape, and body proportions with high skin realism and natural texture, keeping the exact same outfit from image 1 without alteration. Set the scene inside a professional studio with a seamless infinite white background, soft studio lighting, realistic reflections on the vehicle paint and rims, subtle ground shadow, ultra-realistic editorial fashion photography style, 85mm lens, sharp focus, high detail.

↓ **RESULT: Subject with Vehicle**

AI-generated scene with subject posed alongside the Maybach

Step 3: Close-Up Detail Shot

This gives you the cinematic eye and mouth panels for the collage.

📋 **PROMPT — CLOSE-UP FASHION PORTRAIT**

Tight close-up portrait from chest up, man in **[OUTFIT DESCRIPTION]**, gold chain and accessories visible, **[PROP/VEHICLE]** blurred in background, soft studio rim lighting, editorial fashion photography, bokeh, 85mm lens, cinematic color grading with warm tones

↓ **RESULT: Close-Up Portrait**

Cinematic close-up — perfect for eye and lip sync panels

Step 4: Generate Multiple Angles

Create 4-6 different angles from the same scene for variety in your collage.

📋 **LOW-ANGLE HERO SHOT**

Cinematic low-angle shot of a man leaning against a **[VEHICLE]** in a white studio, camera tilted upward from ground level, dramatic lighting from the left, shallow depth of field on the vehicle's front grille, fashion editorial style, 35mm anamorphic lens flare, moody contrast

📋 **WIDE THREE-QUARTER REAR VIEW**

Wide cinematic shot from the rear three-quarter angle of a **[VEHICLE]** with **[WHEEL DETAILS]**, man standing at the front corner, white seamless backdrop, symmetrical composition, high-end automotive advertisement style, cool desaturated tones, IMAX resolution feel

📋 **SIDE PROFILE SILHOUETTE**

Cinematic side profile shot, man silhouetted against bright white background standing next to a **[VEHICLE]**, strong backlight creating rim light on both the person and vehicle contours, minimal shadows, stark contrast, monochromatic mood, 24mm wide-angle lens perspective

OVERHEAD BIRD'S-EYE SHOT

Top-down bird's-eye view of a **[VEHICLE]** on a white studio floor, man standing beside the driver-side door looking up at camera, graphic composition, clean geometric lines, luxury automotive campaign, high-fashion editorial, crisp studio lighting, drone perspective

DUTCH ANGLE DETAIL SHOT

Dutch angle low shot focused on **[DETAIL — wheels, shoes, accessories]**, man's legs visible in frame, **[OUTFIT DETAILS]**, gritty cinematic texture, shallow depth of field, tungsten warm highlights on chrome trim, street-luxury aesthetic, 50mm prime lens

Step 5: Add a Featured Model (Optional)

Want a second person in your collage? Find a face reference on Pinterest, then use the same two-reference technique.

REFERENCE: Featured Model

Image 1 — Pinterest face reference

↓ RESULT

Generated female full-body in coordinated outfit

- 1 Find a face reference on **Pinterest** (or any clear headshot)
- 2 Upload as **Image 1** (their face) and your generated outfit photo as **Image 2**

- 3 The AI will dress them in a **coordinated outfit** — same color palette, same vibe, adapted to their body type

💡 **Pro Tip:** The model will be dressed to match your aesthetic automatically. Same fabric patterns, complementary colors — like a real styled photoshoot.

PHASE 2

Animate Your Images

Turn your still images into moving clips using Create Studio's animation tools.

Lip Sync (Create Studio → Lip Sync → Kling Avatar)

SOURCE: Close-Up

 **Lip Sync**
Upload song audio

- 1 Upload your **close-up image** (chest-up works best)
- 2 Upload your **song audio**
- 3 Kling Avatar animates the face to match the vocals

🔑 **Key Trick:** One lip sync generation gives you **TWO** collage panels:

- Crop to the **mouth area** → letterbox lip sync panel
- Crop to the **eye area** → letterbox eyes panel

One generation, two clips!

Dolly Zoom Animation (Create Studio → Video)

Use your close-up image with a cinematic motion prompt for subtle, editorial movement.

PROMPT — DOLLY ZOOM

Tight chest-up framing of man in **[OUTFIT DESCRIPTION]**, standing in front of **[BACKGROUND]** in white studio.

Very slow dolly-in, fabric texture catches light, gold chain sways imperceptibly with a breath, **[BACKGROUND]** soft in background bokeh, intimate fashion editorial film, almost still, warm tones

Female Eyes Panel

Crop the featured model's close-up for a dramatic eye panel in the collage.

SOURCE: Female Close-Up

Crop to the eye area for the second letterbox eyes panel

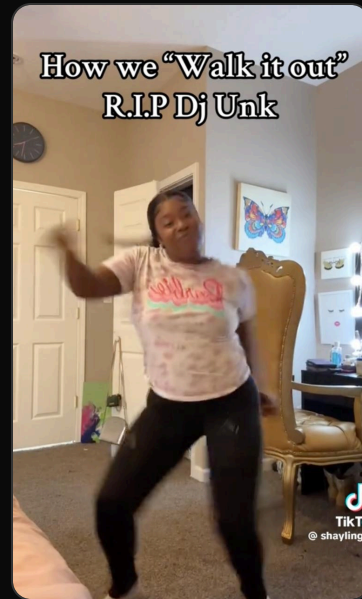

Motion Control Dance (Create Studio → Motion Control)

Make your model dance using a reference video.

SOURCE: Female Full-Body

MOTION: Dance Reference

- 1 Upload your **generated female full-body image** as the reference image
- 2 Upload a **TikTok/Instagram dance video** as the motion reference
- 3 The AI maps the dance moves onto your character — face and outfit stay intact

PHASE 3

Assemble the Collage in CapCut

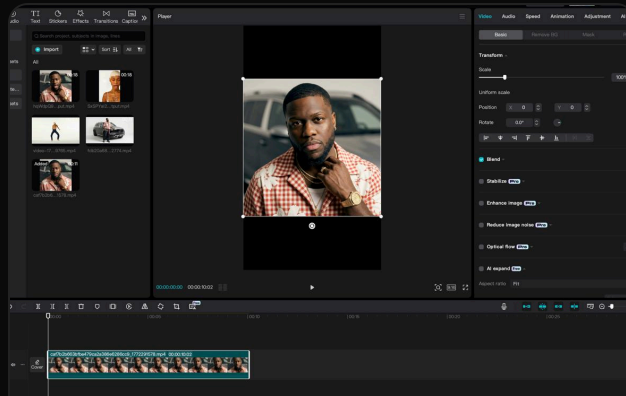

This is where it all comes together. Import all your generated clips and build the collage layout.

Setup

- 1 Open **CapCut** (desktop version recommended)
- 2 Create a new project — **9:16 vertical** (1080×1920)
- 3 Set your background color: **light gray/off-white** for clean editorial, or **black** for moody
- 4 Import all your generated clips

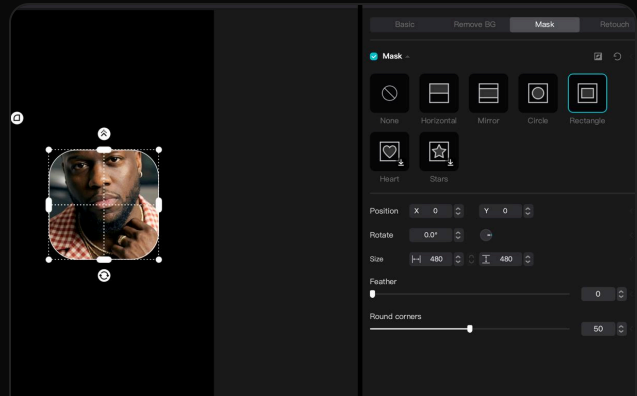

The Rectangle Mask Technique

This is the core method for building the collage. Repeat for each clip:

CAPCUT: Timeline

Stack clips on separate tracks

CAPCUT: Mask Settings

Rectangle mask with 50% round corners

- 1 Drag a clip onto a **new track** on the timeline
- 2 Select the clip → go to the **Video** tab (right panel)
- 3 Click **Mask** → select **Rectangle**
- 4 Scroll down to **Round corners** → set to **50%**
- 5 **Resize** the mask to fit the panel shape (wide letterbox for eyes, square for full-body, etc.)
- 6 **Position** the clip on the canvas where it belongs in the layout

⚠ Important: Each clip goes on its own **separate track**. Stack them so all panels play simultaneously. Leave small gaps between panels for the background to show through.

Collage Layout Example

EYES — Letterbox

Dolly zoom or lip sync, cropped to eyes

FULL BODY

Standing shot with vehicle

FEATURED MODEL

Dance clip or posed shot

EYES — Letterbox

Second subject or different angle

LIP SYNC — Letterbox

Mouth close-up, singing along

Final Touches

- 1 Add your **song audio** to the timeline
- 2 Sync clip cuts to the **beat**
- 3 Adjust timing so all panels play **simultaneously**
- 4 Export at **1080x1920, 30fps** for Reels/TikTok

Apply It to Yourself

Ready to make your own? Here's the checklist:

- 1 **Gather your references:** A clear headshot, outfit inspo photos, optional vehicle/prop reference, optional face reference for a featured model
- 2 **Generate 5-8 images** in Create Studio → Images using the prompts above — vary your angles and compositions
- 3 **Animate 3-4 images:** At least 1 lip sync (gives you eyes + mouth panels), at least 1 dolly zoom for cinematic motion, optional motion control dance for energy

- 4 **Build the collage in CapCut** using the Rectangle Mask + 50% Round Corners technique
- 5 **Drop in your song, sync to the beat, and export**

What You'll Swap Out

Element	In This Guide	Your Version
Face reference	Example headshot	Your headshot / selfie
Outfit reference	Red gingham shirt + wide-leg jeans	Your fit / Pinterest inspo
Vehicle/Prop	Black Mercedes-Maybach GLS	Your dream car, bike, or any prop
Featured model	Pinterest face reference	Anyone you want in the scene
Dance reference	Walk It Out TikTok	Any dance/movement video
Song	—	Your track

💡 **The Formula:** Headshot + Outfit Ref → Generate image library → Animate (lip sync + dolly + dance) → Collage in CapCut with rounded rectangle masks → Add song → Export. That's it.
